

**Post –op Instructions:
Crown and Bridge (Caps and Fixed Partial)**

- 1. Do not chew on that side for 2 weeks until the next appointment**
- 2. Some hot and cold sensitivity is common. Modify the temperature extremes.**
- 3. If temporizes come loose, dry out the inside of the temporary and place some Vaseline inside.**

Press to place and stay away from that area. Call the office so we may replace the temp.

- 4. If extreme pain, sharp edges or high bites are present after the procedure, please call the office so we may speak to you about what you are feeling. We will have you come in if any doubts exists as to the situation you are describing being a problem for you.**

Final Cementation

- 1. Do not chew on that side until following meal (the “skip one meal” policy)**
- 2. Some sensitivity is not unusual initially**
- 3. If high bite occurs, call and come in. The adjustment is usually a matter of seconds to do.**
- 4. If you have any questions, please call. Our staff is there to discuss any matters of concern you have and give you optimal health at all times.**
